 [Yilin Jing](#)

Summary

MSc student in Applied Computational Science & Engineering at Imperial College London and Founder of ReScience Lab, currently leading the development of an innovative canvas-based research platform designed to enhance research efficiency and inspire scientific innovation. Spearheading the creation of AI-powered tools that streamline the research workflow, from literature review to experimental design, while fostering collaborative interdisciplinary research. Combining deep technical expertise with entrepreneurial vision to transform how researchers conduct and share their work in the digital age.

Experience

RESCIENCE LAB

April 2025 - Present

Founder & CEO

London, UK

🔗 [ReScience Lab Website](#)

Founded **ReScience Lab** as a fourth venture, creating an interdisciplinary scientific platform that makes complex research workflows intuitive and reproducible. Leading the development of *AI-powered tools* for fields like **bioinformatics and medical informatics**, guided by principles of "*freedom over growth, sustainability over speed, life over work.*"

PAGEPEEK LTD

September 2024 - February 2025

Product Manager & Project Lead

London, UK

🔗 [PagePeek AI Website](#)

Led a cross-functional team of **6 developers** in developing an **AI-powered PPT generation platform**, focusing on *personalized presentation creation* through AI-generated styles.

WISUP AI LTD

September 2023 - Present

Founder & Lead Developer

London, UK

🔗 [WISUP AI GitHub Organization](#)

Founded **Wisup AI**, leading its development with registered entities in the UK and China. Specializes in *data processing tools* and **AI-driven research automation**. Created the E2M library, achieving over **1,000+ GitHub stars**.

DTECHTIVE LIMITED

September 2023 - March 2024

Data Scientist Full-time

Shelton, England, UK

🔗 [DTECHTIVE Website](#)

Led development of AI-powered data processing and visualization solutions. (1) Webpage to Dataset: Developed a Python API that automatically converts webpages into structured datasets using LLMs, solving challenges in dataset traceability through AI agent-based self-reflection. (2) Dataset Auto Visualization: Created a full-stack web application using Python, DuckDB, and Streamlit for natural language data interaction, with an AI-powered field optimizer enabling text-to-SQL conversion for datasets with over 1,000 fields.

DTECHTIVE LIMITED

June 2023 - August 2023

Data Analyst Intern

Shelton, England, UK

🔗 [DTECHTIVE Website](#)

Developed data processing and analysis solutions for research papers. (1) Arxiv to Dataset: Created a system using NLP techniques and LLMs to extract relevant papers from arXiv based on user intent, achieving 98% data recall rate and 92% dataset accuracy. (2) Full Stack App: Built both frontend and backend using Python, Langchain and Streamlit, successfully delivering a product prototype.

Education

Imperial College London

September 2024 - May 2025

Applied Computational Science and Engineering

MSc

Excellence in Modern Programming Methods & Computational Mathematics

Key Modules: Modern Programming Methods (A*), Computational Mathematics (A*), Data Science and Machine Learning (B), Deep Learning: Machine Learning with Neural Networks (B)

University of Sussex

September 2020 - July 2024

Communications Engineering

BEng

First-Class Honours

Relevant Coursework: Advanced Mathematics, Signal Processing, Machine Learning, Data Structures

Projects

E2M (Everything to Markdown)

June 2024 - September 2024

Created an open-source Python library that converts various file types (doc, docx, epub, html, pdf, ppt, pptx, mp3, m4a) into Markdown format. The project has gained over 1,000 stars on GitHub and is widely used for preparing data for Retrieval-Augmented Generation (RAG) and model training.

🔗 [E2M GitHub Repository](#)

An open-source Python library for converting various file types to Markdown format with over 1,000 GitHub stars.
Python, Markdown, Document Conversion, LLM Data Preparation, API Development, Docker

AI-Powered Presentation Generation Platform

September 2024 - February 2025

Developed an innovative platform that leverages AI to automatically generate and customize PowerPoint presentations. The system utilizes LLMs and AI agents for content generation and styling, while implementing advanced CSS and frontend technologies for precise visual customization.

🔗 [PagePeek AI Website](#)

An AI-powered platform that automates PowerPoint presentation creation with personalized styling and content generation capabilities.

LLMs, AI Agents, Frontend Development, CSS, PowerPoint Generation, UI/UX Design

Skills

Programming Languages

Python, JavaScript, C++, Shell Scripting

Technologies

Docker, Nix, Git, Cloud Computing (AWS/GCP), LLMs, API Integration

Research Skills

Experimental Design, Data Analysis, Scientific Writing, Reproducible Research Practices

Research Interests

AI for Scientific Research

LLMs in Research, Automated Experimentation, Research Reproducibility

Computational Science

Scientific Computing, Simulation, High Performance Computing

Publications

Nanolayered graphene-based tunable terahertz metasurfaces as polarization converters and beam deflectors

November 2022

IEEE Conference on Telecommunications, Optics and Computer Science (TOCS)

🔗 [View on IEEE Xplore](#)

Research on tunable terahertz metasurfaces using graphene for polarization conversion and beam deflection applications. DOI: 10.1109/TOCS56154.2022.10016121
